

Al Reem Island Development, Abu Dhabi

In mid 2006, Tamouh Investments LLC awarded the massive contract for the Al Reem Island Development Phase 1, Plot 1, Zone C project in Abu Dhabi to the IJM, Sunway, Zelan, LFE Consortium (ISZL) from Malaysia.

The project consists of the design, execution, and completion of five towers (tall buildings) together with an associated podium and seven (7) villas with a total Gross Floor Area of 292,937 square metres. Also included are 107,174 square metres of car park and built up areas including open deck, terraces, open grand staircases, ramps, pedestrian mall and roof.

After evaluation of two of the leading web based project collaboration tools on the market, TeamBinder by QA Software and Aconex, the Malaysian ISZL consortium chose TeamBinder as their preferred solution for managing the large amounts of project documents and correspondence the project would generate.

The TeamBinder implementation was completed within 2 weeks in October 2006 and the project participants spread across UAE, Malaysia and Australia have been successfully using the system ever since. The success of this project led to an additional project at Al Reem Zone E being implemented TeamBinder in March 2008.

Of particular benefit has been the centralised document register with the ability to manage document reviews via a workflow on-line being extensively used to coordinate the comments from parties distributed across different geographic locations.

ISZL also implemented a series of customised mail templates to meet their project format requirements including customised and automated reference numbering of all incoming and outgoing correspondence. Having all project correspondence centrally filed and stored automatically has not only been a great time saver but has ensured nothing is lost.

About QA Software

QA Software is the leading provider of information management solutions for the engineering and construction industries. Headquartered in Melbourne, it provides a suite of products that ensure clients deliver their projects faster and within budget.

A proven track record on thousands of projects world-wide and the ability to understand client requirements have made QA Software solutions industry leaders.

TeamBinder

Key Project Statistics:

400+ Users

150,000 pieces of correspondence

4,500 Drawings with on-line reviews being utilised.
