

How Do I Install a Customisation from QA Software?

Question

How do I install a customisation from QA Software?

Answer

QDMS Customisations are normally supplied via Email in the form of either a ZIP File or a self-extracting EXE. Instructions for extracting the customisation are provided within the email message accompanying the customisation. Generally you are required to extract the ZIP file into the application folder (eg C:\QASOFT\QDMS) after first backing up your existing installation.

Once you have extracted the ZIP file or selected the self-extracting EXE:

1. Run QDMS and login as a user who has **Supervisory Access**. If this is a new installation of QDMS use the UserID "QA" and password "QA".
2. Select one of your projects (such as the demonstration project).
3. From the **Tools** menu, select **Options**.

If your customisations are Project Specific:

4. Click on the **Project Settings Tab** and click the **Edit Details button** on the toolbar.
5. Populate the fields in this screen as follows:

Custom Transmittal Type 1 field type:	.XXXXXXXXXX
Custom Transmittal Type 2 field type:	.XXXXXXXXXX
Custom Library field type:	.XXXXXXXXXX
Custom Menu field type:	.XXXXXXXXXX
Custom Configuration File field type:	.XXXXXXXXXX

6. Click the **Save button** on the toolbar.

If your customisations are for ALL projects

7. Click on the **Program Defaults Tab** and click the **Edit Details button** on the toolbar.
8. Populate the fields in this screen as follows:

Custom Transmittal Type 1 field type:	.XXXXXXXXXX
Custom Transmittal Type 2 field type:	.XXXXXXXXXX
Custom Library field type:	.XXXXXXXXXX
Custom Menu field type:	.XXXXXXXXXX
Custom Exe field type:	.XXXXXXXXXX

9. Click the **Save button** on the toolbar.
10. Quit and Re-start QDMS.

For some customisations it is necessary once logged back into QDMS to run the Install Customisation option from the Tools menu. You will be instructed if this is required.
